Smart
Dispensing
Solutions

For Today's Quality Minded Manufacturer

Welcome to Dispense Works Inc.

Conveyors and index dials are available to streamline parts handling when automation is required.

Dispense Works leads the industry with the best built, most industrialized dispensing machines available. These systems are quickly becoming the “operators choice” with features that redefine the terms simple, easy and operator friendly.

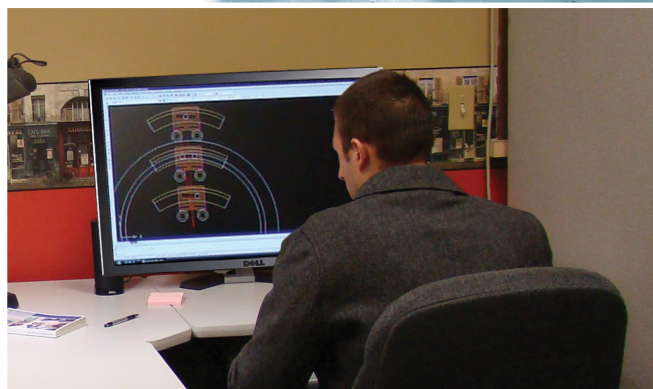

Today, our systems are hard at work in many different industries, setting new benchmarks for performance. This multi-industry experience and success can be combined and applied to address your specific application whether standard or customized.

High volume production. Standard products such as these EZ-64 plates are produced on modern CNC equipment in batches of several thousand per run for delivery when you need it.

Our modern, ultra-efficient manufacturing and development facilities control costs and ensure accuracy through high volume production and stringent quality control.

Latest version subscriptions of design software ensures compatibility with your team.

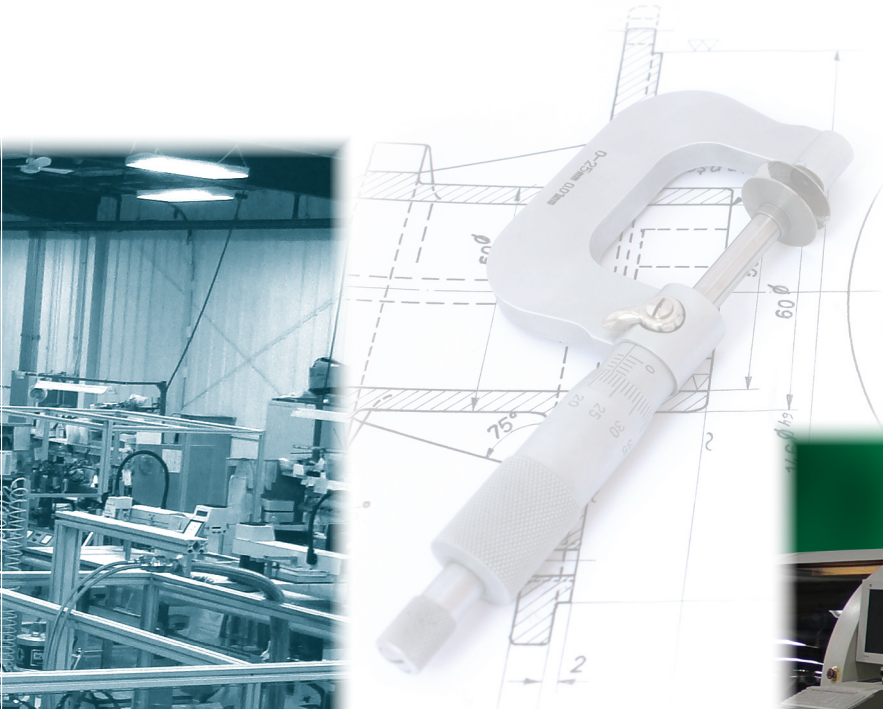

By constantly challenging existing “methods” with a new generation of ideas, we can provide better solutions to help you meet and exceed your dispensing needs.

These advantages assure that your machine radiates the type of quality and reliability which you will be proud to bring to your production floor.

With several large assembly and staging areas, we can handle projects of any size and to any level of sophistication.

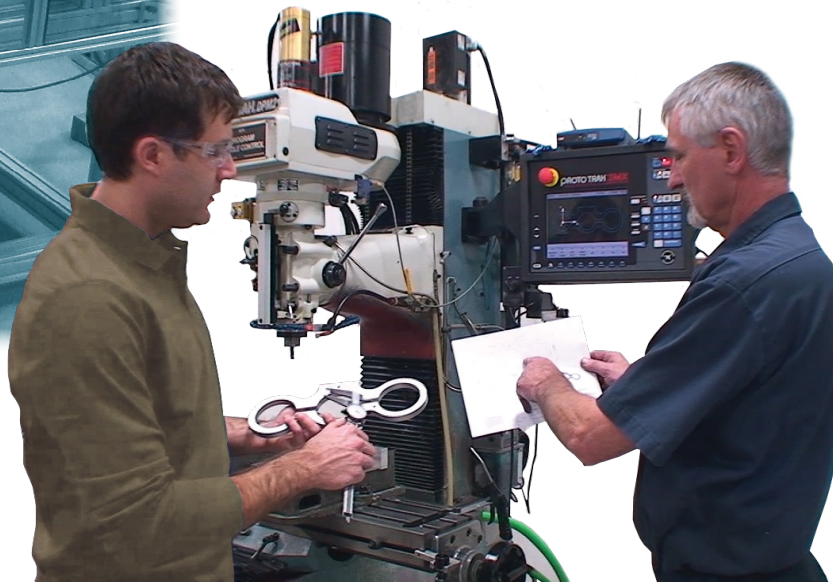

On Site:

- Engineering / Design
- CNC Machining
- Fabrication / Welding
- Assembly / Testing
- Electrical / Wiring
- Software / Programming
- SMT Assembly
- Research & Development
- Separate Climate Controlled Tool Room

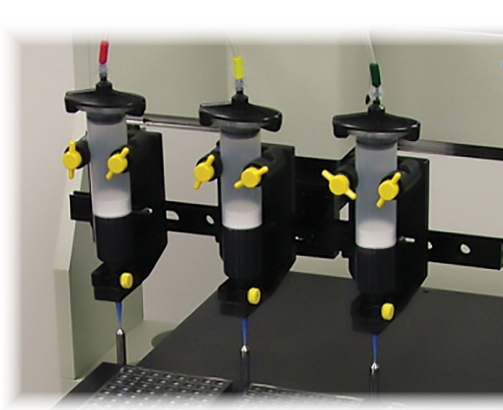

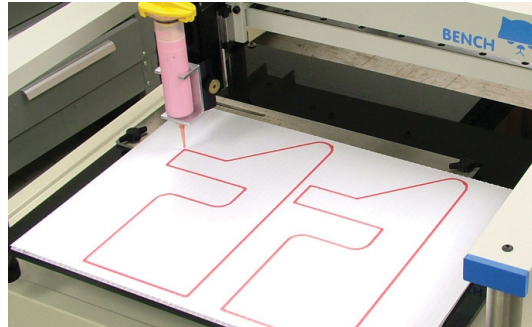

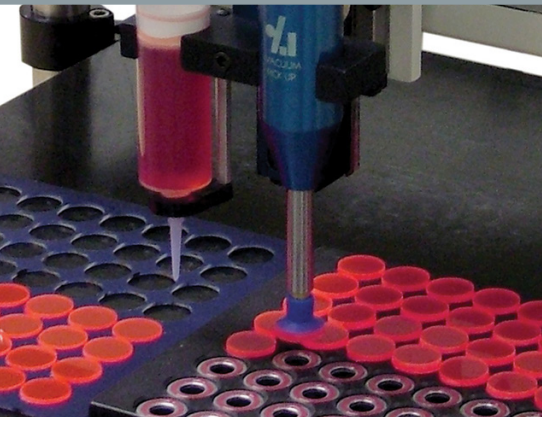

Manufacturing from “board level” with pick & place SMT line.
Over 25,000 square feet dedicated to R&D and high-tech assembly.

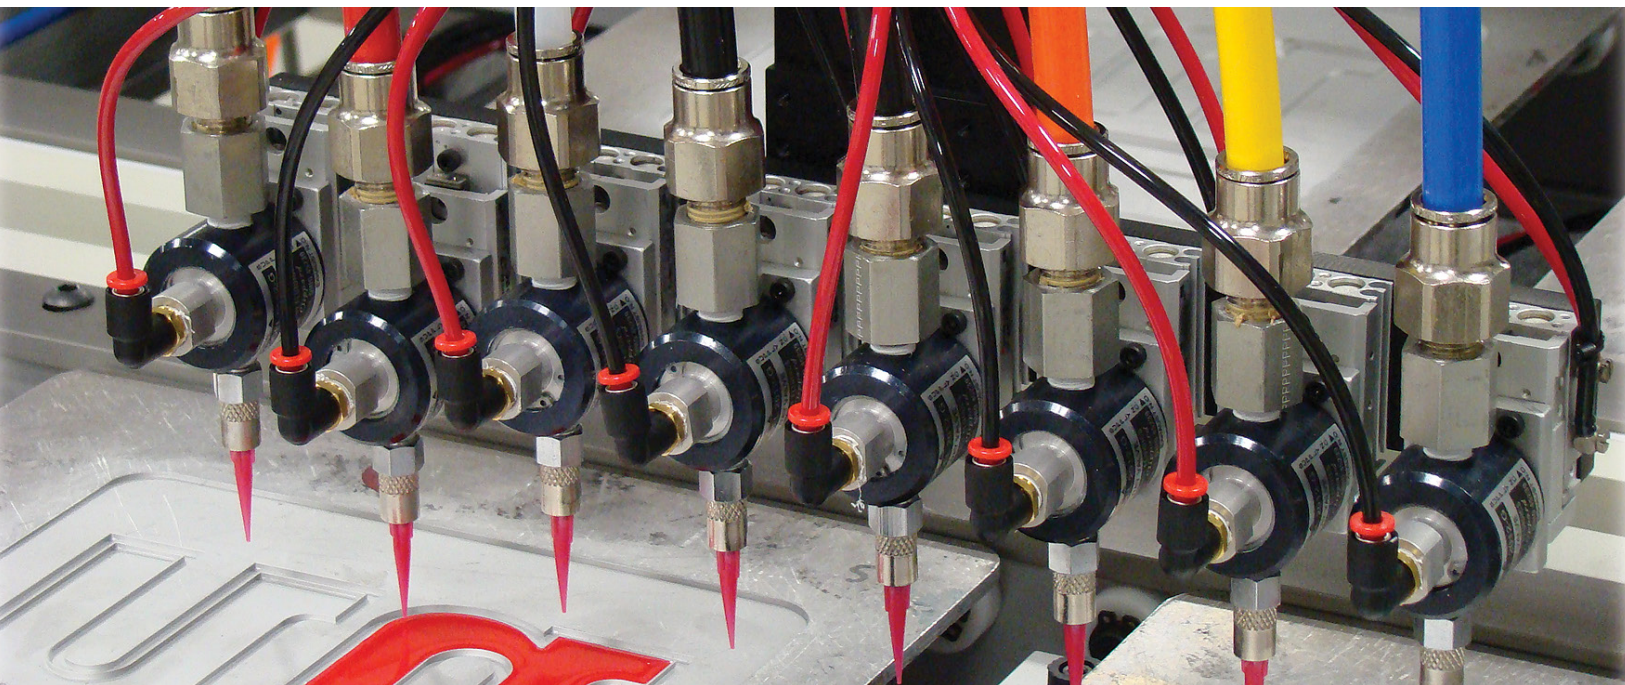

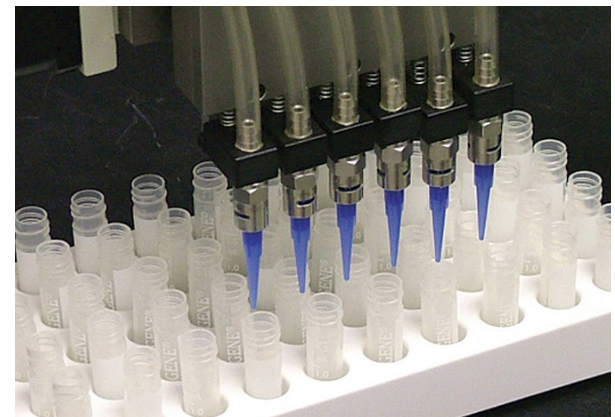

Control face plates are assembled with controllers, LCD screens, touchpads and E-stops.

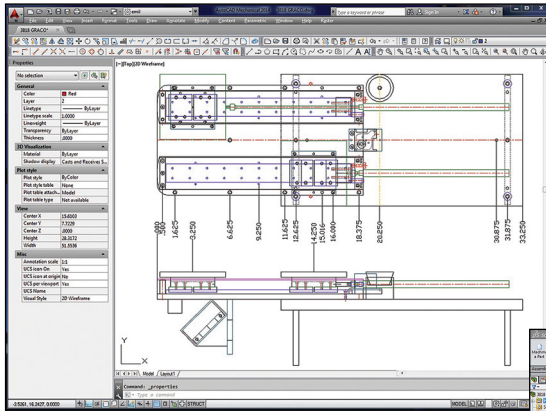

We Manufacture Solutions

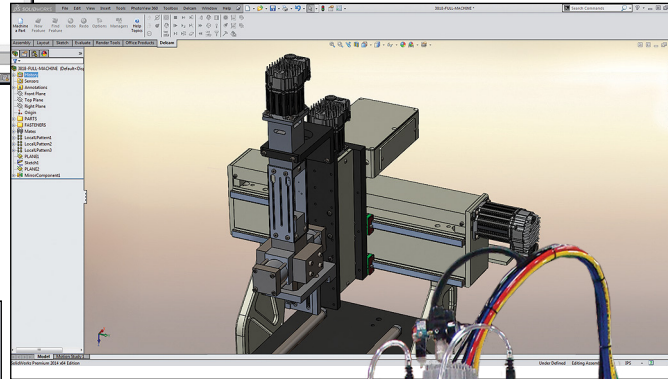

ASSEMBLY
GASKETING
2 PART EPOXY
POTTING
HOT MELT
CAPPING
FILLING

Greater Productivity

Whether your unique application is satisfied by a standard Dispense Works robotic system or requires a completely fresh approach, our staff is pleased to expend that extra effort to deliver precisely what you demand.

Dispense and assemble products on one benchtop system.

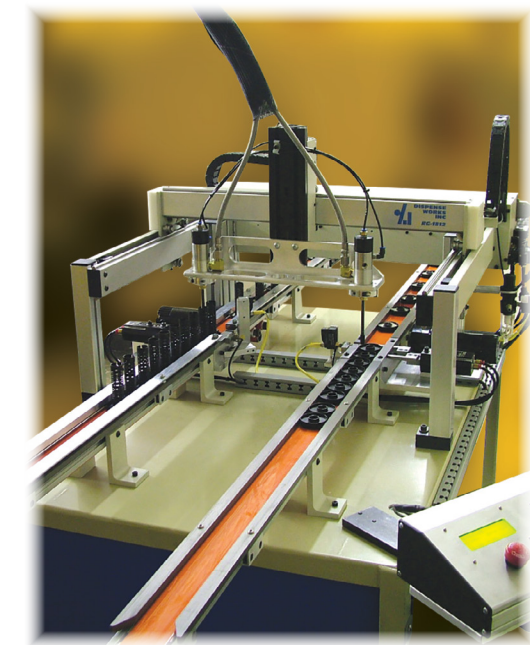

Machine tool quality construction blends high speed performance with high payload capacity.

“We are very satisfied with our Dispense Works robotic dispensing equipment. We found it easy to set-up and operate.”

~ Industrial Engineering Manufacturing Company

Large format dispensing systems (4' x 8' and larger) for both single and two part materials are one of our specialties.

Modular overhead gantry designs easily accommodate conveyors, indexers, shuttles, etc.

Available with integrated and removable 2 part cartridge dispense heads in industry standard sizes.

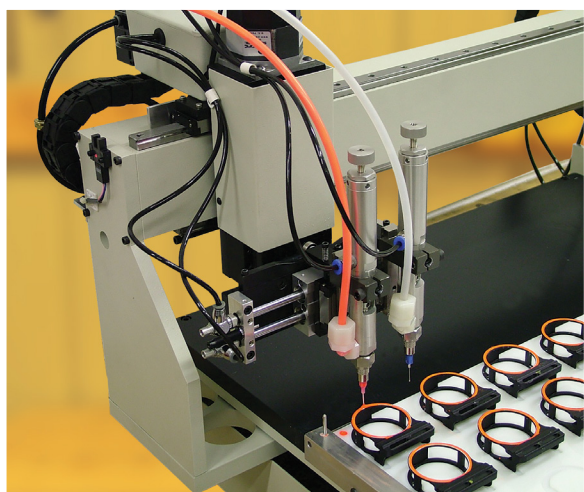

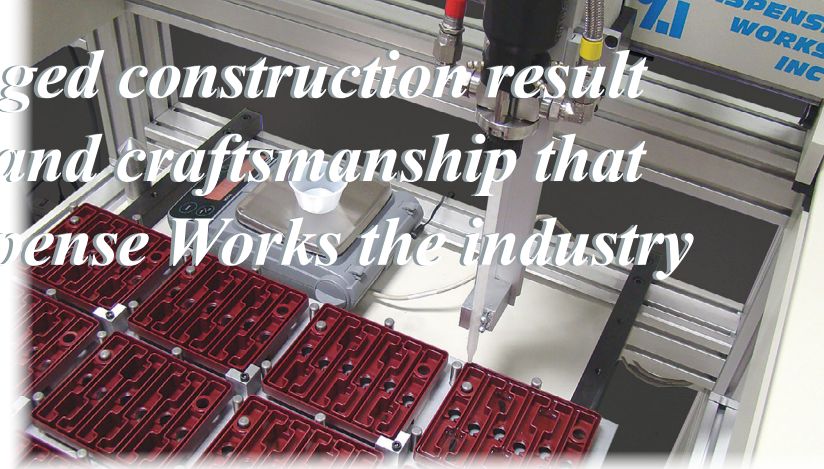

Ultra precision models include a granite base with upgrades for the most demanding applications.

The clean lines and rugged construction result from solid engineering and craftsmanship that are quickly making Dispense Works the industry favorite worldwide.

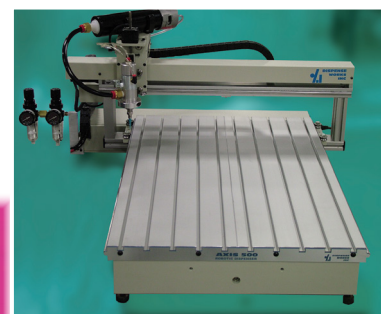

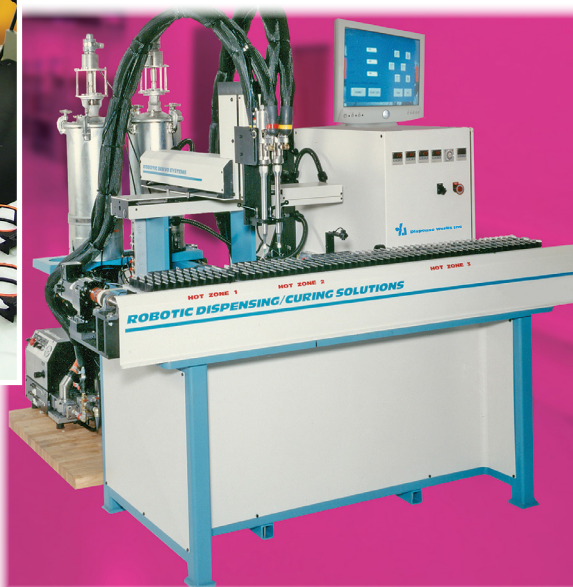

“This is the level of automation we were looking for. It has the features you’d expect in high end machinery.”

~ VP Engineering - Bio Medical Company

Automatic control and offsets for multiple valve/head combinations.

Affordable robotics with large work areas offer a great foundation for fixturing your product.

“We are very pleased. We needed a supplier to trust with our production both locally and abroad, and with the more complex two part meter mix equipment.”

~ Multi National Manufacturer
- Production Manager

The EZ series. The world's only valve / syringe controller with a built-in X-Y-Z motion system.

All in one solutions for potting, curing, assembly on in-line tray / pallet processing applications.

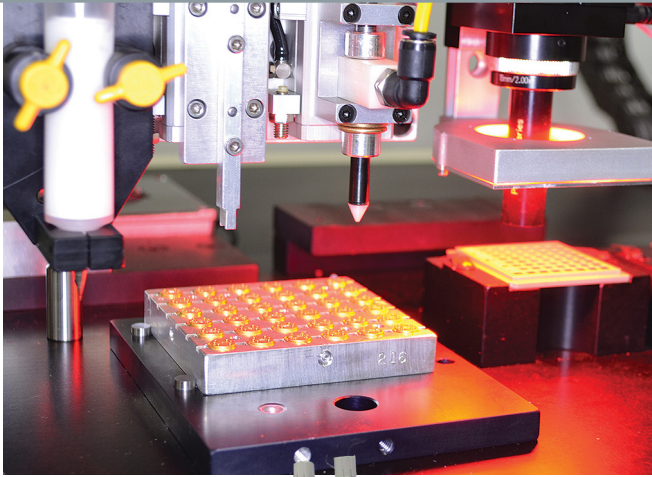

Seamless integration of heated platens, syringes, vacuum tables, etc.

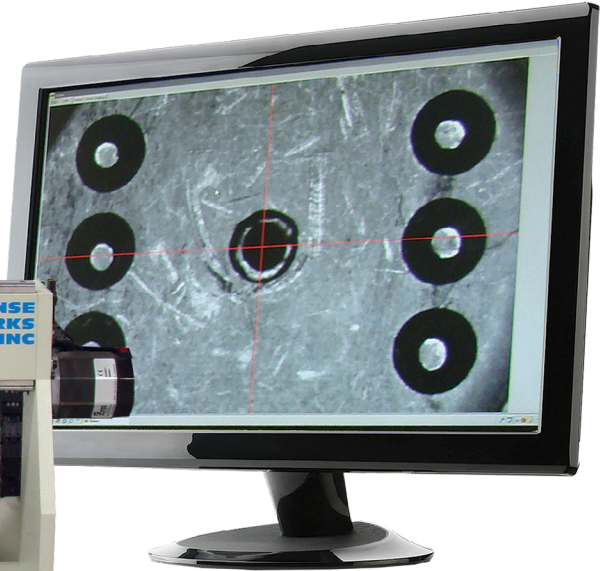

Complete system for filling, tipping, capping and more in a truly space saving benchtop design.

Better Controls, Better Results

Thousands of installations worldwide...

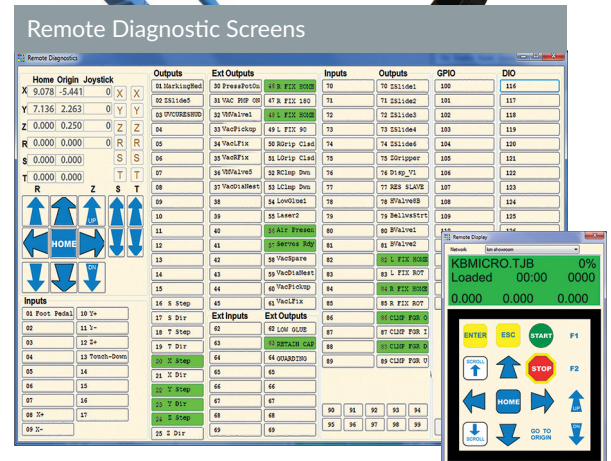

Industry proven control system combines real time motion control, I/O logic and vision with a rich list of pre-programmed functions in a tightly integrated package, requiring no external PLCs, valve controllers or PCs.

Vision systems, with top and/or bottom viewing cameras provide automatic pattern recognition, part correction and inspection functionality.

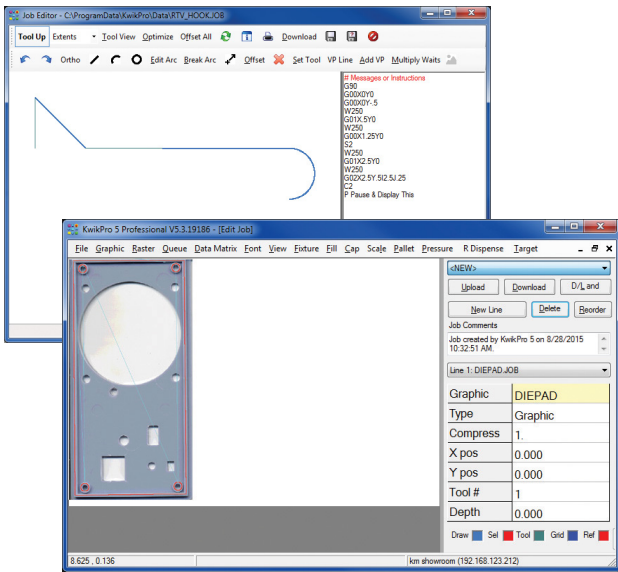

Available "X" upgrades include linear encoder scales with ultra-precise ball screws for accuracy measured in microns.

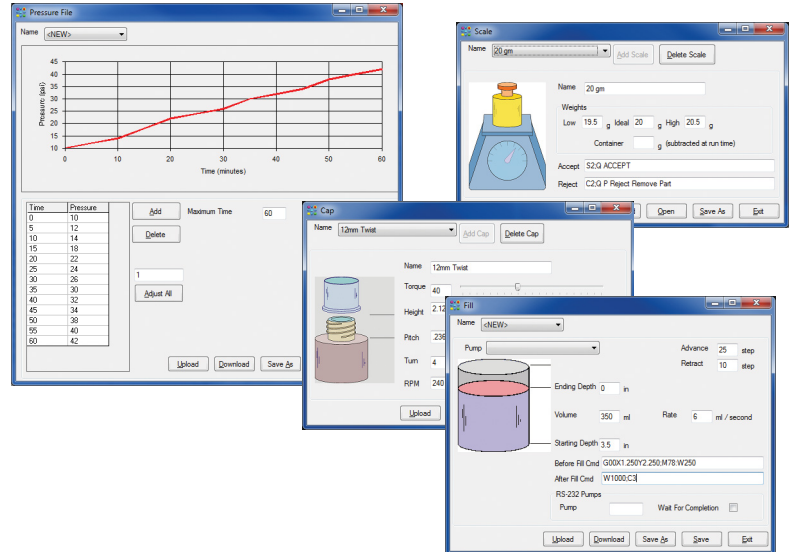

A well thought out diagnostics interface provides control and status of all axes and I/O in a real time digital dashboard. Great for program development & debug.

Software That Just Can't Be Any Simpler
